CROP QUEST ... FOCUSED ON YOUR SUCCESS

We know change is what makes the industry grow and allows products and services to get better. While we can't predict the future, we certainly have a better understanding of what works so we can help you be better prepared to meet your cropping goals. For that reason, Crop Quest Agronomic Services was formed.

CROP QUEST ... WHERE EXPERIENCE COUNTS

At Crop Quest, we believe personnel determines the success of the company. From our field agronomists to our highly experienced management staff to our experienced geographical information specialists and customer service staff, Crop Quest employs some of the most progressive and dedicated people in the industry. We not only know crop production and agriculture, we live it.

Crop Quest is an agronomic service company that is 100% employee-owned. We sell no products, only professional, unbiased production information designed to provide our customers with cropping recommendations based on science and experience, not unproven trends and gimmicks.

CROP QUEST ... VISION ADDS VALUE TO EVERYTHING

At Crop Quest, we are working with state-of-the-art production agricultural software to accurately

predict cropping trends, including precisely positioned fertilizers, better yielding seed hybrids and pesticide/fertilizer applications. We have developed an Information Lab to precisely guide our customers' agronomic decisions that greatly reduce risks and helps them make more-informed decisions. And we continue to invest in new software technology, laboratory expertise and highly qualified people. Crop Quest is moving forward to continue to meet the needs for higher, more-profitable production.

CROP QUEST ... INFORMATION AND DIAGNOSTIC EXCELLENCE

Identifying issues before they become production problems and identifying specific insects, diseases or environmental conditions before they impact your crops is critical. It's equally important to quickly address the specific problem. Wasting labor, chemicals and money treating an unidentified problem is equal to doing nothing at all. That's why Crop Quest agronomists and their support teams are focused on finding the problem and then implementing the correct, least-cost plan of action.

Crop Quest offers diagnostic testing capabilities – specifically for crop production diagnoses – including soil testing by reputable soil-testing labs and a Crop Quest-designed Information Lab. Producers, crop

consultants and dealers can request analysis and interpretation of production agriculture data through our certified SST Information Lab, which is operated by Geographical Information Specialists who are also agronomists.

Crop Quest agronomists have at their fingertips the latest production data and inputs to provide farmers with more accurate inputs data, production data, yield assessment and a host of other information critical to make the most informed decisions. At Crop Quest, we're interested in finding solutions, not just generating and compiling data. Whatever your production concern, your Crop Quest agronomist is prepared, trained and ready for the challenge.

CROP QUEST ... WE'RE HERE TO HELP

We are highly confident in our experience, abilities and professional expertise to help your farming enterprise grow. If we can help you meet your production goals, please contact our friendly, experienced agronomy team today by simply calling **(620) 225-2233** or visiting www.cropquest.com.

**Crop Quest Agronomic Services ... Crop
Advanced. Science. Solutions.**

CROP QUEST ... FULL-SERVICE BENEFITS

Our list of agronomic services expands as our clients demand more from each acre of land. Our full-service program includes:

- Soil sampling
- Fertilizer recommendations
- Insect scouting
- Weed and disease scouting
- Ag-chemical recommendations
- Irrigation scheduling
- Equipment calibration
- Seed variety planning
- Crop budgets
- Regular field checks
- Detailed field reporting
- Permanent record keeping
- Field mapping with GPS systems
- Grid sampling
- Yield data analysis and interpretation

Crop Quest agronomists working across the entire Grain Belt are in constant communication via Crop Quest's mobile communication system. This invaluable information network allows farmers the most up-to-the-minute information on insect infestations, cropping management decisions and advanced marketing recommendations.
